

Herceptin and Zemeta treatment - timing ...

[sweetman1954](#) 1 posts since

10-Mar-2010 Hello, I am trying to find out if there is anyone out there who has been on Herceptin and Zemeta for at least 4 to 5 years, which has been given to me every three weeks. First of all I would like to find out how they are doing and what their side affects have been over this period. Secondly, the infusion timing of the treatment has been given to me over an hour and a half, but since the beginning of February they have changed this to half an hour. I have had one treatment over an hour, but I feel that my side affects increased. Lots of bone ache and more tiredness and hot flushes. I am today going to give the one hour infusion another go and see what happens. I would love to spend less time at the hospital, so I am not against changing this regime as it is progress.

I look forward to hearing from you.
